case vault

Designed by Case Workers – for Case Workers.

State child welfare professionals struggle with the lack of consistency and integration in their existing systems.

The fragmented nature of state, federal, and tribal practices and requirements further complicate their tasks. Add in outdated technology that limits their ability to work efficiently both in the field and the office, and you have the perfect storm of negative impacts on the children.

CaseVault is a modern and revolutionary business process management system for the child welfare system.

Built in a scalable, modular and configurable approach, using Salesforce Public Sector solutions, CaseVault delivers consistency and integration while meeting relevant requirements. With mobile technology, and an intuitive user interface, child welfare workers can be productive and efficient in both the field and the office.
